## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-2, 19, 21, 22, 23-24 and 36 are rejected under 35 U.S.C. 102(e) as being anticipated by Levy ( Pub. No.: US 2003/0112974).

In regard to claim 1, Levy provides for generating, for each of the output images, the digital watermark (Fig.2 element 102, para. 26), the digital watermark having at least one attribute (Para.27 see message symbols), wherein each attribute is a function of a variable associated with the attribute (Para.26, note mapping key and carrier key is a pseudorandom number that acts as a carrier signal for the message payload), the variable being capable of modification from image to image to produce a different digital watermark on each of the output images ; and applying the digital watermark to each output image to produce corresponding watermarked images ( Para.40)

With regard to claims 2 and 24 Levy provides for a method , wherein the generating step comprises: generating, for each of the output images, the digital watermark, wherein said at least one attribute of the digital watermark is a function of a random number ( Para.40).

Art Unit: 2627

As to claims 19 and 36, Levy provides for repeating generating and applying steps a plurality of times for each output image (see last part of Para. 40).

In regard to claim 21, Levy provides for applying said watermark to a substantial portion of the said output images to produce corresponding watermarked images (see Para. 26).

With regard to claim 22, Levy provides for ensuring that there is overlap from image to image in the watermarked portions of said watermarked images (see Para. 34).

AS to claim 23, see the rejection of claim 1. It recites similar limitation as claim 1. Except for a computer program product (see Para. 64). Hence it is similarly analyzed and rejected.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 45-47 are rejected under 35 U.S.C. 103(a) as being unpatentable over Levy (US 2003/0112974) in view of Kanevsky et al. (US 2002/0107750).

In regard to claim 45, Levy provides for a method, for producing a commercial version of the computer program, said commercial version of the computer program having a first output file format (Fig.2 element 102, para. 26, also see Para.64); the prior

Art Unit: 2627

art of Levy does provide for a non-commercial version of the computer program, said non-commercial version having a second output file format that cannot be read by said commercial version of the computer program, and wherein the output images produced by said non-commercial version of the computer program are watermarked with a visible watermark. Kanevsky provide for limitation above (Para. 18 note trial or demonstration version or sample, further note element 9) unpleasant visual and auditory stimulus is produced). The prior art of Levy and Kanevsky are combinable because they are from the same field of endeavor (watermarking). At time the invention was made, it would have been obvious to a person of ordinary skill to incorporate the teaching of Kanevsky with the system and method of Levy. Because the invention of Kanevsky relates to a system for encouraging users to purchase software applications after being provided with trial or demonstration versions of samples of the applications. See Para. 1.

With regard to claim 46-47. See the rejection of claim 45, note para. 18, further note element 9) unpleasant visual and auditory stimulus is produced).

### **Objected Claims**

3. Claims 3-18,20, 25-35 and 37-44 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
